Re Item V.

1. Although claims 1 and 15 have been drafted as separate independent claims, they appear to relate effectively to the same subject-matter and to differ from each other only with regard to the definition of the subject-matter for which protection is sought and in respect of the terminology used for the features of that subject-matter. The aforementioned claims therefore lack conciseness and as such do not meet the requirements of Article 6 PCT.

Furthermore document DE 1 025 752 B (D1) (see column 1, line 54 to column 3, line 7 and figures) discloses all the features of the independent claim 15. Consequently the subject-matter of this claim is not novel (Article 33(2) PCT).

2. Document DE 1 025 752 B (D1) discloses a belt sander, comprising:
a housing (11,12);
two rollers (14,15) which are bearing mounted in the housing (11,12) and which are adapted to guide a sanding belt (13), wherein a sanding surface lies parallel to the common external tangent plane of the rollers and wherein a sanding area is located between the rollers (14,15) in the sanding surface;
a support structure (12) placed between the rollers for supporting the sanding belt (see column 1, line 54 to column 3, line 7 and figures).

In order to ensure that the reference surface of the sanding depth reference member and the active part of the sanding belt run parallel to each other, in claim 1 a new belt sander is proposed wherein a releasable sanding depth reference member extending on at least one side of the sanding area for the purpose of obtaining a reference surface, said sanding depth reference member lies against the support structure and is adapted to support the sanding belt in the sanding area.

None of the cited documents discloses or suggests this solution and the requirements of novelty and inventive step of the PCT are fulfilled.

3. Claims 2 to 14 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.
